ABSOLUTE / UPAJ

Agri-input commerce and institutional product delivery

Adjacent commerce and B2B/B2G work built around agricultural distribution and partner requirements.

Role: Product leadership across the Absolute portfolio | Period: October 2021–November 2024

Reported outcomes and scope

2,000+ SKUs · Reported launch catalogue

30 days · Reported store launch period

□2L / day · Reported first-month revenue

The supplied narrative does not define realised versus booked revenue.

The product problem

Absolute’s agricultural ecosystem created demand beyond advisory and trading: inputs for growers, custom institutional workflows and government use cases. These surfaces needed their own product requirements while sharing operational capabilities with the wider platform.

My role

I led rapid agri-input commerce delivery and worked on custom platforms for institutional and government partners. The portfolio names World Bank, JICA, the Government of Assam and Bank of Brazil; the Assam example is fisheries monitoring.

What I built

The Professional Profile describes a 30-day agri-input store launch covering more than 2,000 SKUs and 200 stores, coordinated across operations, purchasing and finance. The product problem joins catalogue availability with physical distribution and commercial execution.

Institutional presentations describe farmer advisory, farm-health information, soil testing, field maps, market linkage and B2B/B2G applications. These documents show proposal and product scope; they are not used to infer an unrecorded implementation outcome for every institution.

A catalogue with a physical distribution dependency

I led the agri-input commerce launch: more than 2,000 SKUs across 200 stores within a reported 30-day build. Operations, purchasing and finance were involved alongside product delivery. A catalogue alone was insufficient because the customer-facing offer depended on an available product and a physical distribution network.

The launch reports □2 lakh in daily revenue during its first month. That result belongs to this store-launch programme. It is kept separate from the larger phygital distribution references in the supporting portfolio, which describe another stage or scope of the business.

Different institutions, different product jobs

The platform remit also included custom B2B and B2G work. The Professional Profile names World Bank, JICA, the Government of Assam and Bank of Brazil, with fisheries monitoring identified for Assam. The Tamil Nadu presentations show the capabilities being discussed: Insoil soil testing, farm-health information, satellite and NDVI views, Khasra field maps, advisory and market linkage.

These materials show the range of institutional requirements around the agricultural platform. A state-agency proposal, a commerce launch and a bank deployment are separate product settings. The case preserves that breadth while leaving proposal acceptance and institution-specific impact with the individual records that would establish them.

What changed

The Professional Profile reports □2 lakh in daily revenue during the store's first month. An additional compilation describes a larger phygital network of 350+ stores and □60 crore annual revenue, but its stage and personal attribution are unclear. Those figures remain supporting context rather than being merged with the launch result.

The lesson from this work

This case demonstrates managing adjacent product surfaces around a common agricultural ecosystem. Useful delivery connects catalogue, information, operating capacity and partner requirements; each use case still needs its own scope and measure.

Evidence and attribution

Institutional decks contain proposals and product descriptions. Larger store and revenue claims in the mixed compilation are not consolidated into personal outcomes.

Thirty-day/2,000-SKU/200-store/□2-lakh-daily figures come from the Professional Profile. Tamil Nadu decks include proposals. The 350-store/□60-crore compilation has unresolved period and attribution.
