ABSOLUTE / UPAJ

Adapting credit capabilities for the ONDC ecosystem

A documented extension from agricultural risk information towards SME credit requirements.

Role: Product leadership across the Absolute portfolio | Period: October 2021–November 2024

Reported outcomes and scope

SME credit adaptation

A workstream documented alongside rural-credit capability, without a separate measured outcome.

The product problem

A credit capability developed for agricultural borrowers does not automatically fit SMEs. The ecosystem, data available and business workflow change, even when some risk primitives are reusable.

My role

I contributed to the product work described with ONDC leadership on parallel credit infrastructure for SME borrowers. This was a separate institutional workstream alongside the agricultural-risk and public lending integrations.

What I built

The work explored adapting risk primitives and the credit system to the ONDC ecosystem's requirements. It brought the existing agricultural-data and institutional-platform experience into a different borrower setting. The documented scope is collaboration and product definition rather than a completed platform-wide launch.

Keeping the SME workstream distinct

A rural farm assessment and an SME credit use case have different evidence and operating contexts. The workstream concerns that adaptation, separately from ULI's rural borrower population and Upaj's international deployments. Reuse therefore meant examining a new product setting rather than transferring the old programme's adoption numbers.

The contribution adds ONDC as a distinct institutional partner context in the portfolio. It sits alongside the wider B2B and B2G product remit, with its own ecosystem requirements and borrower profile.

The contribution that can be described

The outcome preserved here is the product-definition workstream and collaboration with ONDC leadership. A complete pilot specification, production acceptance and borrower-level result are not available, so those remain outside the described contribution.

What changed

No isolated usage, revenue, approval-rate or repayment outcome is reported for this workstream. The lending reach figures from ULI-related material are not transferred to ONDC.

The lesson from this work

The transferable product pattern is reuse with changed assumptions. A common technical capability still needs a new user and partner model when the borrower segment and operating ecosystem change.

Visual references and walkthroughs

Documented workflow: SME credit requirements → Adapt agricultural risk primitives → Ecosystem collaboration → Partner information exchange → Lender evaluation

An authored explanation of the workflow described in this case study. This is a diagram, not a captured product screen.

Evidence and attribution

This is a documented collaboration and scope statement, not ownership of national ONDC infrastructure.

ONDC collaboration and risk adaptation are reported in the Professional Profile. No pilot specification, accepted production release or isolated borrower outcome is supplied.
