ABSOLUTE / UPAJ

Supporting agricultural portfolio and proposals

Reference material covering insurance surveys, public-sector work, distribution strategy and company development.

Role: Supporting team / proposal material | Period: Dates vary within supplied records

Reported outcomes and scope

Insurance survey App + Web

A product work area in the supporting compilation.

Distribution and institutional proposals

Supporting team and proposal context, without consolidated personal outcome claims.

The product problem

The additional Absolute material spans several different problems: collecting crop-insurance survey data, strengthening agricultural value chains, connecting physical distribution to digital systems and explaining the platform during investment due diligence.

My role

These records are included as supporting portfolio context. The compilation does not consistently establish which deliverables were personally led, team-owned or proposed. This case therefore preserves the documented work areas without presenting their aggregate revenue and user numbers as personal headline achievements.

What I built

The material describes an insurance survey app and web portal, World Bank and Uttarakhand agricultural projects, a strategy for physical/digital distribution and a rural pipes-and-fittings digital-transformation roadmap.

It also describes investment due-diligence workstreams, a smaller enterprise-trade pilot and agricultural credit SaaS. The Tamil Nadu presentations add context on advisory, Insoil testing, satellite farm health, cadastral maps and market linkage.

• Government and multilateral agricultural value-chain initiatives.

• Digital and physical agri-input distribution.

• Crop-insurance survey workflows.

• Rural distribution and dealer-management strategy.

• Product, technical and regulatory due-diligence workstreams.

The supporting workstreams in the archive

The additional notes and institutional decks describe the following portfolio areas. They are included as team, proposal or business context because the compilation does not consistently establish personal responsibility or a complete delivery record.

• Crop-insurance field surveys: an app and web workflow described across multiple seasons; user-versus-survey counts and revenue attribution remain unresolved.

• Agricultural value-chain projects: World Bank/Uttarakhand notes and JICA/Assam references, including fisheries monitoring and institutional advisory requirements.

• Phygital distribution and Upaj centres: store-network, ARPU and expansion notes, separate from the earlier agri-input launch cohort.

• Rural pipes-and-fittings transformation: a digital roadmap for a distribution business; the client's turnover is context, not value created by this work.

• Investment due diligence: product, technology and regulatory workstreams described around a company raise, without a personally evidenced ownership breakdown.

• Enterprise trade pilot: logistics, inspection, KYC and other partner categories, qualified leads and transacting-account notes; its smaller pilot GMV is separate from SilkRoute's headline.

• Agricultural risk SaaS and farmer-credit planning: projected ARR and a financial-year target, retained as planning figures rather than delivered revenue.

What changed

Claims in the compilation include a 350+ store phygital network, insurance survey usage and revenue, government-project revenue and a company capital raise. Their personal attribution is not established. The □14 crore SaaS ARR and □6 crore farmer-credit figure are explicitly a projection and a target, respectively, rather than delivered results.

The lesson from this work

The value of this supporting material is its breadth of product and operating questions. It is best read alongside the delivered cases, with a clear separation between a proposal, a team-level result, company context and a personally documented contribution.

Evidence and attribution

Supporting material includes team-level claims and proposals whose individual attribution is not established.

Projected ARR, revenue targets and client/company turnover are not delivered personal results.
