CASHKARO / BANKKARO

College.money and the education-loan marketplace

Connecting students, lender policies, distribution partners and case operations in an education-lending journey.

Role: Lending product and business owner | Period: March 2025–Present

Reported outcomes and scope

40% · Reported enquiry-to-application conversion

Attributed to education lending in the Professional Profile.

The product problem

Education lending requires more than presenting a list of lenders. Student and applicant circumstances affect eligibility, documents and the next action. Fragmented lender forms create repeated work for applicants and a difficult case-management process for the people helping them.

My role

I owned education-loan product work across the borrower journey, partner integrations, funnel measurement, operating model and commercial terms. In the shared portfolio conversation, College.money is identified as the CashKaro production environment for this work.

What I built

I connected common application inputs, document collection, eligibility checks and lender routing. MoEngage and internal dashboards gave the team a view of the funnel, while partner agreements defined how applications and commercial outcomes moved between organisations.

College.money’s current published discovery surface provides a product reference for this education-loan work. The more detailed policy, document and reviewer journeys are explored in the EduLoans study.

Turning student intent into a workable case

I mapped the journey from enquiry to application, including the evidence a student needed to collect and the handoffs that could stop a case progressing. The marketplace used a thin origination layer: common application inputs, document collection, eligibility pre-checks and lender routing. This made the case preparation part of the product rather than a separate job left to the applicant.

The marketplace addressed student-lending needs, including upskilling and tier-2/3 applicants. The later EduLoans build gives a more detailed study-abroad matching workflow. College.money is the production education-loan environment identified in the shared portfolio conversation; the marketplace and technical builds are presented as related stages of the work.

Building the product and the business together

I worked with engineering on the application and lender handoff, with growth on the CashKaro distribution surfaces, and with operations on following the case after submission. MoEngage and internal dashboards made the funnel visible step by step. This let the team discuss the point of abandonment or delay rather than only the final conversion total.

I also owned the commercial partner conversations: pricing, payout structures, KYC responsibilities and service levels. Monetisation was part of the launch design because a completed loan creates both a customer outcome and a partner payout. The integration, student journey and commercial model had to describe the same service before an application could move reliably across the organisations involved.

What changed

The education-loan launch reports 40% enquiry-to-application conversion within the launch year. The wider CashKaro lending business reports □5.5 crore in monthly loan disbursements. This is loan principal moving through the lending business; the source notes retain the differing vertical definitions.

The lesson from this work

The product contribution is coordinating a complex service into a usable journey. The student application, evidence collection, reviewer work and lender relationship all affect whether an enquiry becomes a workable case. Product and commercial ownership connect those steps with the economics of the service.

Watch the public product journey

These recordings combine the public College.money pages and illustrations. The published-journey video describes later stages from website content; OTP-protected application screens were not captured.

Evidence and attribution

College.money production attribution is a direct statement in the supplied shared conversation.

Published website captures are current product references; they do not establish the scope of every historic result.

□5.5 crore/month is described as education-loan disbursement in the Professional Profile and as wider lending in other supplied CV wording; it is not established as study-abroad-only volume. Production attribution for College.money comes from the shared conversation. Positive-economics timing conflicts across records.
