GUJARAT ACTION GROUP

# Live resource information during the COVID crisis

Connecting rapidly changing hospital, oxygen and medicine information with people seeking help.

Role: Volunteer | Period: April–June 2021

## Reported outcomes and scope

### Live resource database

Hospital-bed, oxygen and medicine availability recorded through volunteer updates.

### Volunteer coordination

Documented collaboration with ground staff and volunteers across India.

## The product problem

During the second COVID-19 wave, patients and families needed current information on beds, oxygen and medicines. Volunteers and ground staff held updates that could become stale quickly, making coordination and clear communication central to the service.

## My role

I volunteered with Gujarat Action Group from April to June 2021. I created a centralised resource database and coordinated live updates from volunteers and ground staff, supporting people looking for hospital beds, oxygen and medicines during the second COVID wave.

## What I built

The resource combined live updates from volunteers and ground staff about beds, oxygen and medicines. The purpose was to make changing availability easier to find for patients, families and hospital or field teams.

I helped coordinate the information effort alongside the database. The useful service depended on people supplying current information and others being able to access it during a period of urgent need.

## What changed

The March 2022 CV records the volunteer effort and describes support reaching thousands of people and teams. A verified beneficiary count or clinical-outcome measure is not available, so the result presented here is the information resource and coordination contribution.

## The lesson from this work

This work demonstrates coordination without a formal product organisation. In a rapidly changing service, the usefulness of information depends on how people update it and communicate its limits.

## Visual references and walkthroughs

Documented workflow: Ground volunteer updates → Live resource availability → Beds, oxygen and medicine records → Volunteer coordination → Resource information for patients

An authored explanation of the workflow described in this case study. This is a diagram, not a captured product screen.

View the online case study for the full image gallery and playable videos.

## Evidence and attribution

Volunteer work is outside the full-time employment timeline. No clinical outcome or independently verified beneficiary count is claimed.

The thousands-helped description is self-reported; software stack, verification protocol and clinical outcomes are not supplied.
