Learning agritech through aquaponics operations

Farm procedures, harvest and packing coordination, and working with an experienced field team.

Role: Farm operations intern | Period: May–July 2018

Reported outcomes and scope

35 · Reported field workforce coordinated

1.5 acres · Farm scale in the early CV

The product problem

An aquaponics operation joins crop production, fish systems, inputs, harvest and fulfilment. A change in one routine affects the next, making the operating detail an important part of understanding agricultural products.

My role

I interned with Water Farmers Canada on the Madhavi Farms project in Bengaluru from May to July 2018. I supported farm operations, established procedures and coordinated daily work with 35 women field workers under the farm leadership.

What I built

I established procedures covering farm inputs and management, harvest, packing and supply. I worked closely with farm leadership, with practical exposure to integrated pest management, biofiltration and crop diversification.

The later profile describes a larger operation with fish stock and weekly production-capacity figures. Those provide context for the integrated farm system, while the original internship record identifies the field responsibilities and SOP work.

What changed

The internship record describes a 1.5-acre farm and coordination with 35 field workers. The contribution was operational: repeated tasks, procedures and the connection from farm inputs to harvest and supply. No isolated production uplift is attributed to the internship.

The lesson from this work

This experience provides a grounded view of the service behind an agritech interface. Clear routines and respectful coordination matter when the next task depends on the quality of the previous one.

Visual references and walkthroughs

Documented workflow: Aquaponics farm inputs → Growing and farm operations → Harvest procedures → Packing and quality routines → Supply-chain coordination

An authored explanation of the workflow described in this case study. This is a diagram, not a captured product screen.

View the online case study for the full image gallery and playable videos.

Evidence and attribution

The workforce figure describes coordination during an internship, rather than a later full-time management role.

Early internship area/worker figures and later operation-capacity figures describe different scope. SOP work is reported; no before/after production measure is attached.
