UPAJ / PORTFOLIO REFERENCE

Agriculture, through three lenses

RiskStac, FinStac and GrowStac. A visual record of Upaj's public product propositions, preserved for Priyam Sameer's portfolio.

CAPTURED PUBLIC WEBSITE / RiskStac landing page. Original site screenshots and image assets are retained in the archive.

RISKSTAC

Credit-risk intelligence for agriculture.

Agri lenders and financial institutions.

FINSTAC

Insurance and financial resilience for farming.

Farmers, insurers and distribution partners.

GROWSTAC

Precision agriculture and farm-level insights.

Enterprises and their farmer networks.

PORTFOLIO CONTEXT

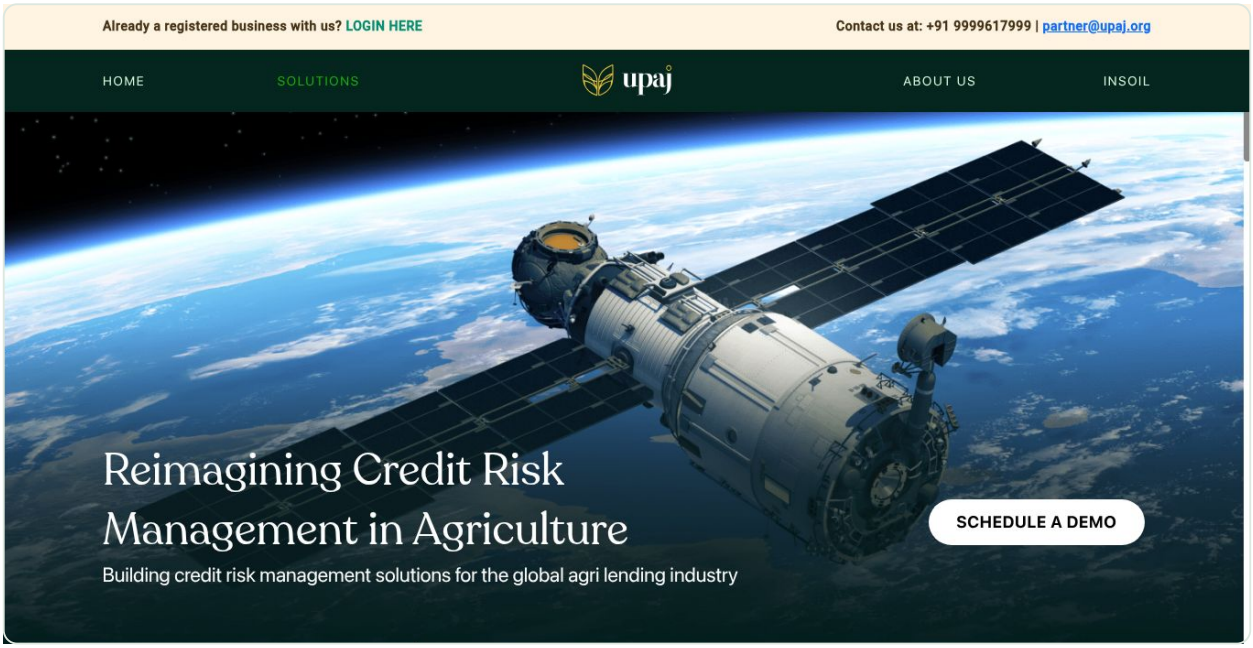

Prepared for **Priyam Sameer**. The archive records the public-facing Upaj / Absolute product material selected by Priyam. Product-specific responsibilities and measured outcomes should be added from his project records.

Capture date: 13 October 2026. These pages show solution marketing, explanatory assets and contact entry points; authenticated operations are outside this record.

UPAJ / PORTFOLIO REFERENCE

RiskStac

Credit-risk management for agricultural lending, built around farm-level data and monitoring.

PUBLIC LANDING PAGE / https://www.upaj.org/riskstac

WHAT THE PAGE PRESENTS

The page frames agricultural lending as a data problem: assess farm conditions and monitor risk through the life of a loan. The stated inputs include satellite, IoT, weather / climate and soil-health data.

Farm Credit Report

A farm-health-based credit score and report support lending decisions.

Repayment Risk Mitigation

Custom insurance and farm-progress dashboards are presented for portfolio risk.

Farm Health Monitoring

The page describes tracking farm performance and repayment risks during a loan.

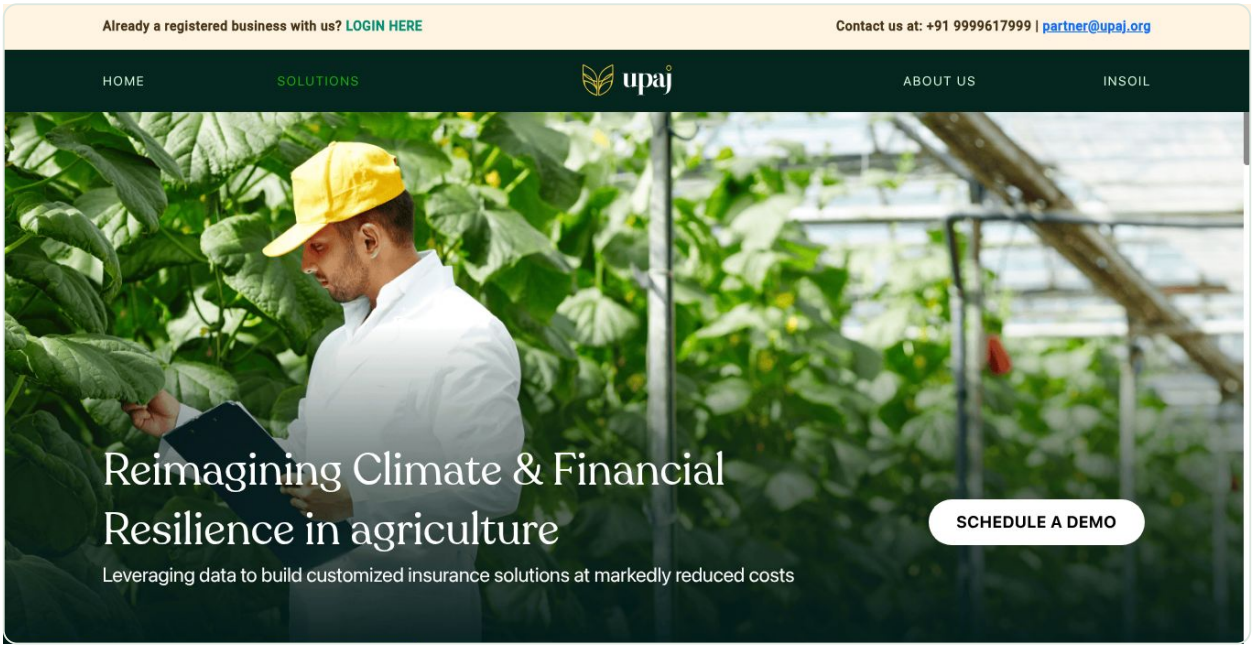

PRODUCT LOGIC / PAGE-DESCRIBED

Combine farm and environmental data; surface credit-relevant information; track farm health and emerging repayment risk. This summarizes the published solution logic, not a tested lending transaction.

The public page does not expose the credit report, model logic, lender dashboard or an authenticated monitoring session.

FinStac

Data-led insurance solutions for climate and financial resilience in agriculture.

PUBLIC LANDING PAGE / https://www.upaj.org/finstac

WHAT THE PAGE PRESENTS

FinStac presents personalised insurance, with cover tailored around local perils and triggers. The range spans crop, cattle, motor, livestock and fishery insurance.

DIY Platform

DigiFasal offers farmer-selected crop cover through the Upaj app or APIs.

Phygital Ecosystem

POS agents and paravets deliver insurance alongside the Upaj app.

E-2-E Insurance Products

Custom cover is described through agronomy, science, underwriting and technology.

Climate Resilience

The page positions cover against heat spells, flash floods and extreme rainfall.

PRODUCT LOGIC / PAGE-DESCRIBED

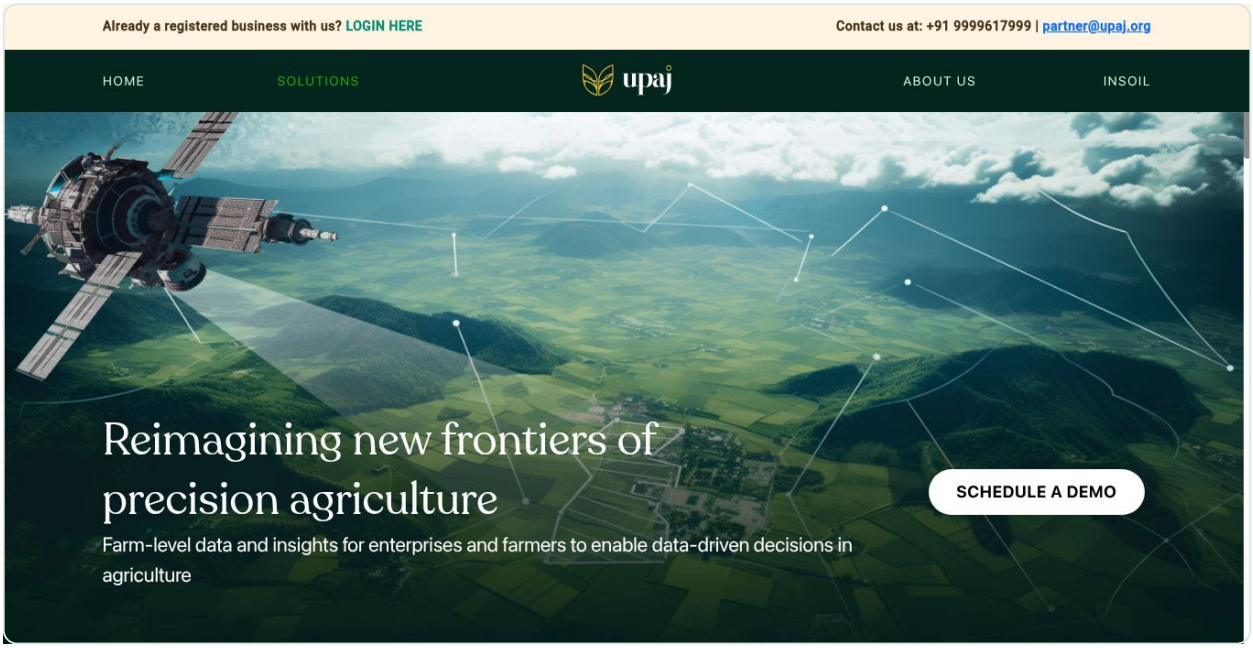

Tailor insurance to agricultural perils; distribute through the app, APIs and field agents; let farmers choose cover and insurer. Policy issuance and claims were not inspected.

Pricing reductions and the site's 'India's 1st' description are marketing claims; neither is independently verified by this capture.

UPAJ / PORTFOLIO REFERENCE

GrowStac

Farm-level data and insights for enterprises and farmers to inform agricultural decisions.

PUBLIC LANDING PAGE / https://www.upaj.org/growstac

WHAT THE PAGE PRESENTS

GrowStac presents precision agriculture through advisory, technology, research and personalised solutions. Its public panels describe API integration, farm insights, agronomy support and innovation.

Advisory

AI / ML-driven advisory is described as a checklist delivered in the Upaj app.

Technology

Data-backed solutions are framed around IoT, satellite and soil-health data.

Research Frontiers

Tailored R&D projects are positioned around crop yield and quality.

Personalised Solutions

Enterprises, NGOs and cooperatives are offered advisory and agronomist support.

PRODUCT LOGIC / PAGE-DESCRIBED

Connect farm-level information with enterprise systems; turn data into insights and app checklists; support decisions through agronomy. These are published capabilities, not a tested API or advisory session.

API integration is explicitly advertised, but contracts, endpoints, recommendation quality and deployment architecture were not inspected.

The public journey

The three pages share an enterprise solution-discovery pattern. This map records public navigation and explanatory content, rather than a completed customer transaction.

Stage	What is visible	What it establishes
01 Discover	Product-specific hero and value proposition; site navigation across solutions.	The target problem and intended audience.
02 Understand	"Why" / "How it works" content and offering panels.	The solution logic advertised by the site.
03 Evaluate	Impact-story cards and a shared testimonial section.	Public supporting material; not independent outcome validation.
04 Make contact	GrowStac inquiry form: interest, name, email, country, mobile, organisation, designation and help message.	Blank personal fields; India / +91 defaults. No personal information entered or submitted. Other pages: demo CTA viewed.
05 Return as a business	"Already a registered business with us? LOGIN HERE".	A separate sign-in route; authenticated workflows were not captured.

CONCEPTUAL PRODUCT FLOWS

RISKSTAC

Farm data / credit visibility / ongoing risk monitoring. Inputs and offerings are named on the public page.

FINSTAC

Data-led insurance design / physical and digital distribution / farmer access. Actual policy and claims workflows remain outside the capture.

GROWSTAC

Farm-level information / insights and agronomy / advisory and tailored solutions. API integration is named in the public material.

Conceptual flows summarize the published propositions. No API sequence, scoring model, underwriting decision, agronomy recommendation or backend integration is inferred from them.

Evidence that travels with the work

This reference keeps visible interfaces, page-stated capabilities and portfolio attribution distinct so the material can support a clear, defensible case study.

SOURCE RECORD

Primary pages:
https://www.upaj.org/riskstac
https://www.upaj.org/finstac
https://www.upaj.org/growstac
Observed title: "UPAJ - Absolute". **Capture date:** 13 October 2026.
Capture scope: public pages, offering tabs, GrowStac's blank inquiry form and image assets. No personal information was entered; no forms, subscriptions or demo requests were submitted.

Evidence	Reusable material	Qualification
Observed interface	Three rendered pages, opened offering tabs and GrowStac's blank inquiry form.	No personal data entered or request submitted; authenticated operations not inspected.
Original visual assets	Product banners, how-it-works panels, offering images and shared site artwork.	Preserved website assets; their presence does not establish individual authorship.
Published capabilities	Risk reports and dashboards; app / API insurance distribution; APIs, AI / ML advisory and agronomy.	Page-stated offerings. Functionality, efficacy and implementation were not independently tested.
Public supporting claims	Impact-story cards and shared farmer testimonials.	Marketing evidence. The archive does not validate reach, savings, performance or causality.
Portfolio attribution	Material selected for Priyam Sameer's portfolio; the public title names Upaj / Absolute.	Specific role, delivered components, team and measurable outcomes require Priyam's project records.

PRIYAM'S CONTRIBUTION FIELDS

Complete these from delivery records before making personal claims: **role and dates**; **scope and decision rights**; **team and collaborators**; **problem and alternatives**; **key decisions and trade-offs**; **shipped components**; **outcomes with baseline, period and attribution**.

The archive preserves original artwork as evidence of the product's public presentation. It does not establish individual authorship of the website, images, models or operational systems.
